

A: i. Multi-Service Building ii. Digital Platform

A.1. Observation Area

A.1.1: Location and Context

The observation was done in the **university area near the University of Haripur**, located in Haripur, Pakistan. This area is very active because many students, hostel residents, university staff, and local families live nearby or visit this area regularly.

The university area is not only an academic center but also a social and commercial hub. There are several small shops, restaurants, and services along the main road. These shops provide basic daily needs, but they are scattered and located at different distances from each other.

A.1.2: Why This Area Was Chosen

This area was chosen for observation for several reasons:

1. **High Population Density** A large number of students, hostel residents, staff, and local families use this area every day. This ensures a variety of customer types and needs.
2. **Variety of Services Needed** People living or visiting here require many services like food, groceries, banking, digital payments, electronics repair, and personal care.
3. **Opportunity for Improvement** Observing this area makes it clear that there are gaps in convenience. Shops are scattered, so people spend extra time traveling to different locations to fulfill their daily needs. This creates a strong opportunity for a business that provides multiple services in one place.

A.2. Customer Types

A.2.1 People Present in the Area

The area near the **University of Haripur** has a variety of people with different needs and habits. Understanding who uses this area helps identify the kind of services that would be useful.

The main types of people in this area include:

1. **University Students** Both male and female students live in hostels or nearby houses. They visit the area daily for food, groceries, banking, or recreation.
2. **Hostel Residents** Students and young people living in hostels around the university often need quick access to daily-use items like food, drinks, snacks, and personal care products.
3. **University Staff Teachers**, administrative staff, and other employees need convenient services during working hours, including food, banking, and stationery.
4. **Local Families** People who live near the university also visit this area for shopping, food, and daily services.
5. **Shopkeepers and Small Business Owners** are both customers and service providers, often requiring banking, digital payment, or repair services.

A.2.2 Importance of Understanding Customers

Knowing the different types of people in this area helps us understand their needs. For example:

- Students need affordable, quick, and accessible food or grocery services.
- Hostel residents need services that save time because they have busy schedules.
- Staff and local families may want organized and convenient services under one roof.

By understanding these customer types, it is easier to design a business that provides multiple services in one place, reducing inconvenience for everyone.

A.3. Existing Businesses in the Area

A.3.1 Types of Businesses

The university area near **the University of Haripur** has many small businesses that provide daily needs for students, residents, and staff. Most of these businesses focus on food, groceries, and basic services.

The main businesses in the area include:

1. **Hostels** provide accommodation for students and young residents.
2. **Small Hotels and Restaurants**, serving local food and snacks.
3. **Karyana (Grocery) Stores**, selling daily-use items such as rice, flour, sugar, oil, and snacks.
4. **Vegetable Shops**, offering fresh vegetables and fruits for students and local families.
5. **Biryani Shops**, specializing in biryani, is a popular fast-food item.
6. **Traditional Bread Bakery (Naan/Roti Shop)**, serving fresh bread made in traditional ovens.
7. **EasyPaisa and Digital Payment Shops**, providing money transfer and digital payment services.
8. **Small Fast-Food Shops**, offering burgers, pizza, and snacks.
9. **Hair Salons**, providing haircuts and grooming services for men and women.

A.3.2 Market Observation

A.3.2.1 Existing Physical Businesses

Most businesses in the university area are small and located far from each other, which makes it inconvenient for people to buy multiple items in one visit. The majority of shops focus only on food and basic daily needs. Other services, such as banking, electronics repair, hair salons, or recreational facilities, are little bit present but not easily accessible.

Because of this scattered layout, students, hostel residents, university staff, and local families spend extra time walking between shops and services, which is tiring and inefficient.

A.3.2.2 Lack of Digital Services

Another problem observed is the absence of a **digital platform or website** that connects all these businesses together. Currently, if a person wants to order food from a hotel, buy groceries, or use services like a hair salon or hostel booking, they have to **visit each place physically**.

There is no **centralized online service** where customers can view all shops, hotels, and hostels in one place and place their orders through a single webpage or app. This creates inconvenience, wastes time, and reduces accessibility for people who prefer digital services.

A.4. Market Gap

A.4.1 Physical Convenience Problem

The observation of the university area shows that most shops, hotels, and services are **small and scattered** along the main road. Hostels and residential houses are also spread out at different distances.

This creates **inconvenience for people** who need multiple services.

For example, a student or local resident may need to buy groceries from a karyana store, get chicken from a meat shop, and visit a hair salon. Since these shops are far apart, the person must travel between multiple locations, which wastes time and energy.

The scattered setup also makes it **difficult for busy university staff or hostel residents** to complete their tasks quickly, especially during bad weather or exam periods.

A.4.2 Lack of Digital Services

In addition to the physical layout problem, there is no **centralized digital platform** that connects all these services online. Customers cannot browse or order from multiple shops, hotels, or hostels through a single website or app.

This creates a **digital gap** where:

- People have to visit each shop physically.
- Ordering or booking becomes time-consuming.

- Shops lose potential customers who prefer digital convenience.

A.4.3 Key Problem Summary

From the analysis, the main problems in the area are:

1. **Scattered Shops and Services** Customers waste time traveling between distant locations.
2. **No Digital Connection** Customers cannot order or book services from one centralized online platform.

These problems highlight a **clear opportunity** to create a

1. **Centralized multi-service building**
2. **Online platform**

where all essential services are available in one location and accessible digitally.

A.5. Proposed Business Opportunity

A.5.a: Centralized Multi-Service Building

The problems identified in the university area near **the University of Haripur** create a strong opportunity for a **centralized multi-service commercial building**. This building will provide all essential services under one roof, saving time, reducing effort, and improving convenience for students, residents, hostel dwellers, and university staff.

The building will also be connected with a **digital platform**, allowing customers to order, book, or browse services online from one webpage or app.

A.5.a.1: Building Location and Concept

The building will be located on the **main university road**, slightly near the university but not too close. This ensures it is **accessible for all residents and visitors** without disturbing university activities.

The concept is designed to:

- Save time by providing **all essential services in one location**

- Improve convenience for busy students, staff, and residents
- Combine **physical and digital access**, allowing customers to use a website or app to place orders or book services

By positioning the building strategically, it becomes a **central hub for daily life**, reducing the need to travel to multiple scattered shops and services.

A.5.a.2: Structure of the Building

A.5.a.2.1: Ground Floor – Food Court Area

The ground floor will focus on **food and dining**, making it convenient for people who want meals, snacks, or quick bites:

1. A **family hotel** offering a wide variety of dishes suitable for students, staff, and local families
2. A dedicated **biryani outlet**, for those who enjoy fast, popular meals
3. A **fast-food section** offering burgers, pizza, samosas, and other snacks

This arrangement ensures that visitors can **find all types of food in one place** without walking long distances or visiting separate shops.

A.5.a.2.2: First Floor – Financial and Personal Services

The first floor will include **services that people need frequently**:

1. **Bank counters** and **digital payment points** such as EasyPaisa and JazzCash
2. **Electronics shops** and **mobile/laptop repair services**
3. **Hair salons** and **beauty care services**

This floor combines financial, technical, and personal care services, providing a **one-stop solution for daily needs**.

5.a.2.3: Basement Floor – Recreation and Fitness Area

The basement will serve as a **recreational and fitness hub**, offering:

1. **Gym**: A fully equipped **gym** for fitness enthusiasts

2. **Common room:** A **common room** with TV and seating for relaxation and social interaction
3. **Table tennis and badminton courts**
4. **Cricket practice nets:** With proper lighting and safety equipment
5. **Music system:** A modern **music system** to create a lively atmosphere

This floor encourages **healthy lifestyles, entertainment, and social gatherings**, improving the overall quality of life for students and residents.

A.5.a.2.4: Surrounding Facilities

1. **Sports ground:** A **sports ground** on the left side of the building for outdoor activities
2. **Parking area:** A **parking area** on the right side for vans, cars, and bikes
3. **Small sitting area:** A **small sitting area** in front of the building for rest or casual meetings

These external facilities complement the building's purpose, ensuring **convenience, safety, and accessibility** for all visitors.

A.5.a.2.5: Value Proposition

The proposed building provides **multiple advantages**:

1. **Time-Saving:** Multiple services are available in one location, reducing the need to travel far.
2. **Convenience:** Students, staff, and local residents can fulfill several needs in one visit.
3. **Variety of Services:** Food, banking, digital payments, electronics, hair salons, and recreational activities are all included.
4. **Digital Access:** A website or app allows customers to **browse, order, or book services online**, increasing efficiency.
5. **Lifestyle Improvement:** Recreation and fitness facilities improve health and social life for students and residents.

This multi-service building not only solves the current problems but also **creates a modern, centralized hub** that improves the convenience, lifestyle, and productivity of everyone in the area.

A.5.b Digital Platform (Website & Mobile App)

To complement the multi-service building, a **professional website and mobile app** will be developed. This platform will **connect all shops, hostels, hotels, and services** under one digital system, providing convenience, transparency, and easy access for customers.

A.5.b.1 Key Features of the Platform

1. Unified Service Directory

- a. Every shop, hotel, hostel, and service will have its **own profile** on the platform.
- b. Profiles will include:
 - i. Shop/hostel name and type of service
 - ii. Owner's contact number and email
 - iii. Opening hours and location inside the building
 - iv. Menu or product list (for food outlets and grocery stores)
 - v. Price details and special offers
 - vi. Ratings and reviews from previous customers

2. Search and Filter Functionality

- a. Customers can **search for specific services**, such as “hostel booking”, “biryani shop”, “hair salon”, or “electronics repair”.
- b. Filters will allow sorting by:
 - i. Distance from their current location
 - ii. Price range
 - iii. Ratings
 - iv. Availability (for hotels and hostels)

3. Online Ordering and Booking

- a. Customers can **place orders** from restaurants, fast food outlets, and grocery shops directly through the platform.
- b. **Hostel booking** is integrated, allowing visitors to select rooms, check availability, and pay online.

- c. Digital payments are supported through:
 - i. EasyPaiza, JazzCash, and bank cards
 - ii. Wallets and UPI (if integrated)

4. Real-Time Order Tracking

- a. Once an order is placed, customers can **track the status**: preparation, ready for pickup, or delivery if the service provides it.
- b. Notifications via app and SMS for updates.

5. Ratings, Reviews, and Feedback

- a. Customers can **rate and review each service**, helping future users make informed decisions.
- b. Shop owners can **respond to feedback** to improve service quality.

6. Owner Dashboard

- a. Each shop or service provider will have a **dashboard** to manage orders, update availability, and track sales.
- b. Features include:
 - i. Updating menu or product list
 - ii. Receiving and processing orders
 - iii. Viewing earnings and payments
 - iv. Access to customer feedback

7. User-Friendly Interface

- a. Easy navigation with **clear categories** for food, grocery, hostels, salons, and recreational services.
- b. Visual icons for each service type.
- c. Mobile-friendly responsive design so customers can easily use smartphones.

8. Promotions and Announcements

- a. Shops can **publish promotions, discounts, or special offers**.
- b. University events, new shop openings, or building updates can be shared on the platform.

5.b.2: Value position

1. **Time-Saving:** Customers can order or book services **without physically visiting multiple shops**.
2. **Better Organization:** All services are listed clearly with detailed information.
3. **Increased Business for Shops:** Digital visibility attracts more customers, including those who prefer online access.
4. **Convenience for Students and Staff:** Busy schedules are accommodated by online ordering, booking, and real-time updates.
5. **Enhanced Customer Experience:** Ratings, reviews, and order tracking increase trust and satisfaction.

A.6 Target Market

The target market includes **students, hostel residents, university staff, local families, and small business owners** in the University of Haripur area. They need **convenient access to food, groceries, banking, personal care, and recreational services**. The digital platform expands access by allowing customers to **order, book, and browse services online**, making it easier for busy people to save time.

A.7 Conclusion

The area has **scattered shops and limited digital services**, creating inconvenience for residents and visitors. The proposed multi-service building with a **website and mobile app** will provide **all essential services in one place**, saving time and effort. It offers **food, banking, personal care, electronics, and recreation**, improving convenience and lifestyle. This centralized solution meets the needs of students, staff, families, and business owners efficiently and effectively.

B. Falcon Security Solutions Company

B.1. Observation Area

B.1.1: Location and Context

This observation focuses on **Afghanistan**, my home country, bordered by Pakistan, Iran, Turkmenistan, Uzbekistan, Tajikistan, and China. The country has a **diverse population** living in urban centers, small towns, and rural villages. Which has been affected by years of conflict and political changes. Studying the current situation highlights several **market gaps and unmet needs** that create business opportunities, especially in regulated and essential services.

B.1.2: Why This Area Was Chosen

I chose Afghanistan as the observation area because it is **my home country**, and I have a deep understanding of its people, culture, and needs. Being from Afghanistan, I know **what products and services are most in demand** and which types of businesses are likely to succeed.

B.2. Customer Types

The proposed business will serve a wide range of customers in Afghanistan. Since legal firearm ownership is restricted to adults, the **target market includes all individuals above 18 years of age and Taliban** who require safe, legal, and regulated access to weapons and protective equipment.

B.3. Existing Businesses in the Area

B.3.1 Types of Businesses

Afghanistan, my home country, has **passed through many years of conflicts**, which have affected the growth of businesses and services across the country. Currently, the situation is **improving**, and some businesses have started operating, but **the market is still limited and underdeveloped** in many areas.

The main businesses in the area include:

1. **Clinics and Health Services:** Small-scale clinics and pharmacies exist in urban areas, but access is limited, and many regions lack proper healthcare facilities.
2. **Food Markets and Grocery Stores:** Basic grocery shops and food markets are available in some towns, but their size and reach are small, and products are often limited.
3. **Banking and Financial Services:** A few banks and ATMs provide essential financial services, but coverage is minimal, and many people still face difficulty accessing legal banking and digital payment systems.
4. **Other Small Businesses:** Shops selling clothing, household items, and basic services exist in small numbers, but they are scattered and mostly small-scale

B.4. Market Gap

While some businesses exist in Afghanistan, they are limited in number, size, and reach but little bit present and fulfill the people needs.

But **licensed arms and security equipment are completely absent**, leaving a significant market gap.

1. **Access to Licensed Firearms and Security Equipment:** Civilians, hunters, and professionals have no reliable, legal sources to purchase firearms or protective gear.

People who need personal or professional protection cannot access products safely or legally.

2. **Lack of Professional, Government Approved Dealers:** There are no businesses that sell weapons, firearms, ammunition, or security equipment. Existing businesses do not provide proper guidance, safety training, or legal compliance, leaving customers unsure about safe and lawful use.
3. **Growing Demand for Safety and Protection:** Due to past conflicts and ongoing security concerns, there is a high need for regulated and legal solutions for personal safety, hunting, and professional security. Current businesses do not meet this demand, creating a significant market gap.
4. **Limited Awareness and Information:** Many potential customers are unaware of legal processes, licensing requirements, or where to buy safely.

This gap presents an opportunity to **introduce a legal, regulated, and professional business** that provides weapons, firearms, ammunition, and protective equipment for civilians, Taliban hunters, and professionals.

B.4.1: Key Problem Summary

From the analysis, the main problems in the area are:

Limit Access to Licensed Firearms and Security Equipment: Civilian, Taliban, Hunters, and professionals have no reliable, legal sources to purchase firearms or protective gear.

B.5. Proposed Business Opportunity

B.5.1: Falcon Security Solutions Company

The proposed business will be a **main licensed arms and security equipment company in Afghanistan**. This company will operate **fully under government regulations**, ensuring that all weapons, firearms, ammunition, and security equipment are **properly licensed**.

The company will also provide **timely delivery of products** to customers across different cities and regions, making it **convenient, reliable, and accessible**, even for those living far from the main urban centers.

This business is designed to meet the growing demand for **personal safety, hunting, and professional security solutions**, addressing a **critical gap in the Afghan market**.

B.5.2: Key Focus Areas of the Business

1. Legal Firearms Sales

- The company will sell firearms and ammunition **accordance with Afghan government regulations**.
- Products will be available for:
 - a. **Personal protection**: for adults seeking to secure themselves and their families.
 - b. **Licensed hunting**: for legal hunters requiring firearms and proper ammunition.
 - c. **Professional use** : for security personnel and guards working under legal frameworks.
- Every sale will be **documented**, including licenses, registration, and compliance with national laws

B.2. Security Equipment

The company will provide a **range of protective gear and safety equipment** for civilians and professionals, including:

2.1: Assault Rifles (AR)

- **M416**: Versatile, all-round AR
- **AKM**: High damage, slower fire rate
- **SCAR-L**: Balanced AR with moderate recoil
- **QBZ-95**: Exclusive to Sanhok map, automatic AR
- **Beryl M762**: High damage, more recoil

- **G36C** – Medium damage AR (exclusive in some modes)

2.2: Sniper Rifles / DMRs (Designated Marksman Rifles)

- **Kar98k**: Bolt-action sniper rifle, high damage
- **M24**: Bolt-action, slightly faster than Kar98k
- **AWM**: High-damage sniper, one-shot to head with helmet
- **MK14** – Semi-auto/auto, DMR with high damage
- **SKS** – Semi-auto DMR, medium damage
- **SLR** – Semi-auto DMR, high damage

2.3: Submachine Guns (SMG)

- **UMP45** – Moderate damage, good for close range
- **Vector** – Very high fire rate, close-range killer
- **MP5K** – Balanced SMG, close-range
- **Thompson (Tommy Gun)** – Fast SMG, high recoil
- **PP-19 Bizon** – SMG with high magazine capacity

2.4: Shotguns

- **S12K**: Semi-automatic shotgun
- **S1897**: Pump-action, very high damage
- **S686**: Double-barrel, very high damage, close range

2.5: Light Machine Guns (LMG)

- **M249**: High-capacity, sustained fire, good for suppression
- **DP-28**: Medium capacity, less recoil, moderate damage

2.6: Pistols / Handguns

- **P1911:** Standard pistol, low damage
- **P92:** Standard pistol, moderate fire rate
- **P18C:** Fully automatic pistol
- **R1895:** Revolver, high damage, slow fire
- **Desert Eagle / Deagle:** High-damage pistol

2.7: Melee Weapons

- **Pan:** Iconic melee weapon, blocks bullets
- **Crowbar:** Melee, close-range attacks
- **Machete:** Melee weapon

2.8: Crossbows / Special Weapons

- **Crossbow** – Silent, one-shot at close to medium range

2.9: Other for safety

- **Bulletproof vests and helmets**
- **Lockable safes** for secure storage of firearms
- **Non-lethal personal safety tools** such as pepper sprays and stun devices

All products will be **high-quality, certified, and tested** to meet safety standards.

B.3. Training and Guidance

The company will offer **comprehensive training programs** for safe and responsible firearm use.

Training will include:

- **Safe handling instructions** for firearms and ammunition
- **Legal guidance** on ownership, licensing, and usage

- **Best practices for personal protection and security**

Customers can book training sessions **directly at the company store**.

This ensures that all users **understand the legal and safe way to use their products**, reduce risks, and promote responsible ownership.

B.6. Target Market

Falcon Security Solutions Company will serve a **wide range of customers in Afghanistan**, all of whom are **legally eligible (18 years and above)** to own firearms and security equipment. The target market includes **individuals, professionals, and organizations** that need legal, safe, and reliable protection solutions.

B.6.1 Individual Customers

1. Civilians for Personal Protection

- a. Adults who want **legal firearms and protective gear** to safeguard themselves, their families, and property.
- b. People living in **high-security risk areas** or regions affected by past conflicts.

2. Hunters and Outdoor Enthusiasts

- a. Individuals participating in **licensed hunting or shooting sports**.
- b. Require firearms, ammunition, and protective gear for **safe and responsible use**.

3. Rural and Urban Residents

- a. Both city dwellers and rural populations seeking **legal and accessible security solutions**.
- b. Those who previously had **limited access to licensed firearms and equipment**.

B.6.2 Professional Customers

1. Security Personnel and Guards

- a. Licensed security companies and private guards need **firearms, protective equipment, and training** their professional duties.
- 2. **Government-Approved Agencies (Licensed)**
 - a. Authorized law enforcement or defense personnel requiring **regulated firearms and safety equipment**.
- 3. **Business Owners and Property Managers**
 - a. Owners of shops, warehouses, and businesses who need **legal protection for property and staff**.

B.7. Conclusion

Afghanistan currently lacks professional, licensed businesses providing firearms, ammunition, and security equipment. **Falcon Security Solutions Company** will fill this gap by offering legal firearms, protective gear, and training, all fully regulated by the government. The company will serve civilians, hunters, security personnel, and business owners. By combining **safety, legality, and convenience**, Falcon Security Solutions Company provides a **reliable and essential service**, helping people protect themselves, their families, and property responsibly.

The End
